History Beginnings AutoCAD originally started out as a desktop app that ran on the Atari 800 (and later, Atari ST and Amiga) computers and was initially sold as a perpetual license. In 1984, a shareware version (AutoCAD 100-S/SV) was introduced. At the time, it was the first full-featured vector graphics-based CAD program available on the PC platform. It was eventually sold as a shareware program (AutoCAD 100S/SW). In 1986, the first version of AutoCAD to run on IBM-compatible PCs was released (AutoCAD 200), using the same programming code as AutoCAD 100S/SW. This development coincided with the release of the IBM PCjr, which featured a built-in graphics card and thus enabled AutoCAD to run on IBM-compatible PCs for the first time. In 1987, a full-featured AutoCAD 200 desktop version and AutoCAD 2000 Plotter were released, introducing many new features, including support for drawing multi-plot drawings. AutoCAD 200 was also the first commercial program to allow users to take advantage of the graphics power of the then-new IBM PCjr and the Nintendo Entertainment System (NES) for plotter-only (non-CAD) functions. In 1989, AutoCAD was released as a shareware CAD program (AutoCAD 500-S), adding a new feature called drawing profiles. With AutoCAD 500-S, users could take their individual workspaces (also called drawing profiles) and save them as their own custom templates. Users could then use these custom templates with other AutoCAD workstations, such as other office employees, without sharing their AutoCAD data. For many years after its release, the shareware version was the only version offered for sale on the market. In 1989, Autodesk began developing AutoCAD in the MS-DOS environment, which would eventually lead to the 1994 release of AutoCAD LT, an office application (not a full-featured CAD program) that ran on Windows. Unlike its predecessors, AutoCAD LT ran in DOS instead of under MS-DOS, and thus could not access the hardware capabilities of a PC's graphics card (e.g., bitmap and vector rendering). Additionally, AutoCAD LT was designed to run on a single PC and was not able to transfer drawings from one PC

The model data created by the drawing model is part of the AutoCAD database (similar to a relational database). In addition, it is possible to write code that modifies the database. The model database consists of a set of tables that store data of all drawings in the database. The tables are organized into schemes that represent entities (e.g. drawings) and attributes (e.g. dimensions and annotations). Schemes can be linked by key fields. It is possible to access data by name from outside the drawing database. AutoCAD 2018 release The AutoCAD 2016 release is listed on the home page for AutoCAD 2018. AutoCAD 2018 is based on the new object-oriented programming (OOP) API called App SDK. Before AutoCAD 2016 and App SDK, AutoCAD 2011 and previous releases used ObjectARX and the old (VBA) API. The App SDK consists of a set of SDK components, such as: a runtime and a collection of reusable class libraries. SDK is built on top of a well-tested and well-maintained technology infrastructure. Since AutoCAD 2018, there is a compatibility layer for App SDK. A database-based version of AutoCAD drawings (package repository) that is accessible directly from App SDK. In addition to App SDK, 2018 introduced a new C++-based API called AutoCAD Python, also known as AutoCADpy. The basic idea is to write programming functions in the Python programming language and call them from C++/C#/VB code. The C++ API is based on the Microsoft Foundation Classes. Features In AutoCAD 2018, the drawing is represented by a class, which contains a collection of entities. The class can be dynamically added to or removed from the model database. Using the classes, it is possible to create new drawings (with new entities) and edit existing drawings. The C++-based API and the App SDK API are similar. The basic difference is that in C++ the drawing model is based on STL container classes (e.g. `std::vector`), whereas in App SDK the drawing model is based on SQLite database tables (e.g. `std::map`). Drawing files AutoCAD draws are represented in the AutoCAD drawing model. The drawing model is structured as a collection of objects. The objects can be linked to each other by attributes (e ca3bfb1094
